Industrial

Over 25 years of combined experience in Manufacturing Design, Erection and Industry Standards, has made STMS one of the leading competitors in membrane structures.

Sports

- *Clearspan widths*
- *Engineered to last*
- *Hot dipped galvanized steel*
- *PVDF Structural Membrane*
- *STMS Channel System*

Salt

STMS is an innovative building alternative, designed for diverse semi-permanent and permanent needs throughout North America.

Manufactured to endure and last for decades to come, manufactured to with-stand the elements.

PVDF Structural Membrane Fabric

STMS architectural membranes are constructed 21oz PVDF fabric, the industry standard for quality and durability. Based on a woven high quality coated polyester scrim that provides unsurpassed warp and weft strength, our membranes are manufactured to endure the harshest environments. Our membranes are manufactured utilizing the latest technology and employ a number of remarkable enhancements regardless of your choice of color. UV Protected and Fire retardant.

Hot Dip Galvanizing

Our commitment to quality continues with our use of post hot dip galvanizing for all our structural members.

Hot dip galvanizing provides the strongest protection available on the market.

Engineering

STMS Manufactures the most advanced modular steel, tensioned membrane structures in the world. Modern computer technology has allowed STMS to make the next evolutionary jump in modular design, systematically tested before any component was fabricated. STMS structures are the future, available now through an advanced design process that provides limitless possibilities.

Our team is committed to keeping our company on top.

Designed for your needs, built to your specifications.
